Product description:

The M10 low nut with a height of 3 mm is a fastener designed for mechanical fastening of threaded parts. Thanks to its low profile, it is suitable for applications with limited mounting space, especially in luminaires and other assemblies where a compact design is required.

Technical specifications

- Product type: nut
- Thread: M10
- Height: 3mm
- Design: low hexagon nut
- Use: mainly in lighting fixtures

Functions and features

- Low design for installation in limited space.
- The hexagonal outer shape allows tightening with common tools.
- Designed for mechanical locking of threaded connections.
- Suitable for structural and fastening applications in luminaires.

Ideal for

- Installation and repair of lighting fixtures.
- Fastening threaded parts in compact assemblies.
- Applications where a low mounting height of the fastener is required.

Package contents

- 1x M10 nut, height 3 mm

Why choose this product?

- Combines M10 thread with a low installation height of 3 mm.
- It is suitable for use in luminaires where limited mounting space is important.
- This is a standard mechanical fastener for threaded connections.

Installation and operating instructions

- Use with matching M10 thread.
- During assembly, ensure that the nut is correctly seated on the thread and tightened appropriately.
- When used in luminaires, install in such a way that the connection does not loosen during operation of the device.
