

Cord for outdoor roller blinds, white-black, 1m

Product codes:

Reference: AM1378

EAN13: -

UPC: 39253000

Product features:

Color: White

Product attributes:

Product description:

The cord is intended for manual operation of outdoor roller blinds and other shading technology with manual cord guidance. It also serves as a replacement part in case of wear or damage to the original operating cord.

Technical specifications

- Product type: cord for outdoor roller blinds
- Purpose: manual operation of shading technology
- Color: white-black, mottled design
- Sales unit: 1 m of length
- Recommended cord length for installation: 2.5 times the window height

Functions and features

- Serves for manual operation of outdoor roller blinds.
- It is suitable as a replacement part during the service of the roller blind mechanism.
- The mottled white-black design facilitates visual differentiation of the cord from single-color variants.
- It is supplied by the meter according to the selected ordered length.

Ideal for

- Replacement of a worn or damaged outdoor roller blind cord.
- Service of manually operated roller blind systems.
- Installations where a white-black operating cord is required.

Package contents

- Cord for outdoor roller blinds in the ordered length.

Why choose this product

- It is a replacement cord intended for manual operation of outdoor roller blinds.
- Sale by the meter allows choosing the length according to the specific installation.
- The stated recommendation of a length of 2.5 times the window height helps in determining the required meterage.

Installation and operation instructions

- Before ordering, determine the required cord length according to the window height and the requirements of the specific installation.
- During replacement, check the condition of the guides, grommets, and the operating mechanism of the roller blind.
- Guide the cord without sharp bends and away from edges that could mechanically damage it.
- Perform the installation so that the cord does not obstruct the safe movement of the roller blind system.
