

Heat-resistant ceramic wool up to 1400°C, 50x61cm

Product codes:

Reference: AM1928

EAN13: -

UPC: -

Product features:

Product attributes:

Thickness: 10 mm, 20 mm, 30 mm

Product description:

Heat-resistant mats are used to cover areas that are exposed to extremely high temperatures. They are also ideal for protecting areas or objects that are sensitive to heat. Since they do not conduct heat, they can also serve as an insulating material.

Material: Aluminosilicate ceramic fibers

Operating temperature: short-term 1400°C

Fire resistance: Class A1 non-combustible material

Basic features:

- Low thermal conductivity
 - Very low heat capacity
 - Very high tensile strength
 - Resistance to thermal shock
 - Noise cancellation
 - Contains no binder, causes no smoke or atmospheric pollution
 - Does not contain asbestos
 - No curing and drying cycle required
-
